## CLS™ OMIT RGB

The Omit RGB is one of the most successful products on the global LED market.

This success is the result of:

- A high light output due to the use of the powerful Luxeon III LEDs. Therefore, the Omit RGB is capable of forming the main light system in various venues. A fact that has been realised in installations worldwide. The famous Buddha Bar concept that has locations in main cities worldwide, has chosen the Omit RGB as the main source for creating different mood settings.
- The Omit RGB is extremely easy to install. The XLR 7 pole connector system makes installations simple and straight forward.
- As opposed to traditional colour-changing products, the energy savings are enormous.

The Omit 3 x Luxeon® III Floodlight can be used in a large number of applications: the colouring of walls, displays, ceilings, objects and bars. We are sure that creative designers will find their own unique applications, as they have creatively proven to do with other CLS products.

The spot needs to be connected to the CLS DMX-1000 driver/dimmer. A minimum of 6 and a maximum of 12 units can be connected on one single driver. Total cable length max. 40 meters. Please note that all spots will show the same colour, since all spots are placed in one line.

The Omit RGB III is just another example why CLS is becoming the number 1 choice for designers worldwide.
